Every Frontend Team Wastes Weeks Rebuilding the Exact Same UI.

Sound familiar? Same Button. Same Modal. Same Input. Project after project. It ends here.

Time Drain

40–60% of UI dev time spent rebuilding identical components every single project.

Inconsistency

Each dev makes their own button. No shared system. Designs drift with every sprint.

Zero Accessibility

Hand-rolled components skip ARIA. Screen readers fail. Real users get excluded.

No Scalability

Ad-hoc UI becomes unmaintainable. Dark mode, theming, reuse — all nightmares.

Introducing Uibrium — Your Design Sanctuary.

What is Uibrium?

Uibrium is a premium, open-source React design system and component library that marries couture design with rock-solid engineering. It delivers high-fidelity user experiences with deterministic UI integrity — balancing beauty and performance in every element.

- ✓ 19 production-ready components
- ✓ ThemeProvider + system dark mode
- ✓ WAI-ARIA 2.1 accessible interactions
- ✓ Framer Motion micro-animations
- ✓ Radix UI headless primitives
- ✓ ESM + CJS tree-shakable bundles

Install in 10 seconds

```
pnpm add @uibrium/ui  
framer-motion lucide-react
```

Built for

-  React 18+ developers
-  Design system teams
-  Startup & SaaS builders
-  Open-source contributors

How Uibrium Stacks Up.

Honest comparison — no marketing spin. Uibrium highlights what's uniquely yours.

Feature	shadcn/ui	MUI	Chakra UI	Uibrium
Open Source	✓	✓	✓	✓
Radix UI Primitives	✓	✗	✗	✓
Built-in Animations	✗	✗	Partial	✓ Framer Motion
Premium Cursor & FX	✗	✗	✗	✓ Unique
Full TypeScript	✓	✓	✓	✓
Tree-Shaking Ready	✓	Partial	✓	✓
HSL Token System	✗	✗	✗	✓
Sensory Engineering	✗	✗	✗	✓ Exclusive
Auto Storybook Docs	✗	✗	✗	✓
System Dark Mode	Manual	✓	✓	✓ Auto

Five Pillars of the Uibrium Design Sanctuary.

Balance

Symmetrical architecture. Every spacing, token & size decision is intentional and deterministic.

Modularity

Composable primitives. Build any interface from isolated, tested, independent building blocks.

Flexibility

Variant system + className overrides + asChild. Your design, your brand, your rules.

Performance

Tailwind CSS = zero runtime CSS. Framer Motion = GPU-only animations. Nothing wasted.

Accessibility

Radix UI + WAI-ARIA 2.1. Full keyboard navigation. Screen reader tested. No one left behind.

Clean, Layered Architecture.

Built for production. Structured for scale. Every layer has exactly one responsibility.

React 18 · TypeScript · Hooks · Vite

Tokens, Theming, Dark Mode — Engineered In.

Indigo

Violet

Purple

Blue

Cyan

Emerald

Amber

Rose

Typography

Scale xs→5xl. Supports Inter, Space Grotesk, JetBrains Mono.
Consistent rhythm.

Spacing

4px base unit. Tailwind spacing scale. Padding, margin and gap —
always consistent.

Dark Mode

ThemeProvider auto-detects OS preference. Toggle light, dark, or
auto at runtime.

HSL Token API

Colors in CSS HSL variables. Swap entire palettes by adjusting one
hue value.

19 Production-Ready Components

Across 6 Categories.

Interactive

- Button
- Checkbox
- Radio
- Switch
- Dropdown

Forms

- Input
- Textarea
- Select
- Pagination

Layout

- Card
- Table
- Tabs
- Accordion

Feedback

- Alert
- Badge
- Tooltip

Overlays

- Dialog / Modal
- Drawer

Identity & FX

- Avatar
- Navbar
- Custom Cursor
- Preloader

Every Component is Fully Composable and Customizable.

Real-world usage

```
import { Button, Card, Badge } from '@uibrium/ui';  
import '@uibrium/ui/styles.css';
```

```
<Button  
  variant="primary" size="lg"  
  className="your-class"  
  asChild  
  onClick={handleClick}  
>  
  Initiate Equilibrium  
</Button>
```

Variants

primary · secondary · ghost · outline · destructive + custom

Sizes

xs · sm · md · lg · xl — uniform scale across all components

className prop

Tailwind merge. Your classes always win. Zero conflicts.

asChild

Render as next/link or any wrapper — zero extra DOM nodes.

ThemeProvider

Global HSL color overrides. Entire theme in one place.

Dark Mode

system · light · dark — switchable live at runtime.

Up and Running in 3 Steps.

No config hell. No magic boilerplate. Install → Wrap → Import → Ship.

01 Install

```
pnpm add @uibrium/ui  
framer-motion lucide-react
```

Or use npm / yarn — any package manager works.

02 Import Styles

```
import '@uibrium/ui/styles.css';
```

Add once to your root file — main.tsx or _app.tsx.

03 Use Components

```
import { Button } from '@uibrium/ui';  
  
<ThemeProvider>  
  <Button variant='primary'>  
    Initiate Equilibrium  
  </Button>  
</ThemeProvider>
```

Wrap your app in ThemeProvider. You're done!

Everything You Need to Ship Beautiful UIs Faster.

Components

All production-tested

3

Utility Hooks

Disclosure · ClickOutside · MediaQuery

100%

TypeScript

Fully typed props & variants

0ms

Runtime CSS

Tailwind = pure build-time

One-package install

`pnpm add @uibrium/ui framer-motion lucide-react` — one command, you're done.

Zero-config dark mode

Wrap in `ThemeProvider`. OS preference respected. Toggle at runtime with one prop.

asChild composition

Compose with `next/link` or any routing component — no extra DOM wrappers.

Documentation-first

Every component documented at uibrium.vercel.app with live examples and prop tables.

Built on Industry's Best Technologies.

React 18

Functional components, hooks, concurrent features, strict mode.

TypeScript

Fully typed props, variants, and APIs. Zero any. IntelliSense everywhere.

Tailwind CSS

Utility-first. Zero runtime CSS. Pure HSL design token palette.

Framer Motion

GPU-accelerated micro-interactions and premium sensory animations.

Radix UI

Headless primitives. WAI-ARIA built-in. Unstyled, fully composable.

Turborepo

Optimized monorepo build caching. Docs and library always in sync.

Your First Open Source Contribution Starts Here.

5 Steps to your first PR

- 1 Fork & Clone** Fork `github.com/aryanony/uibrium` → `git clone` → `cd uibrium`
- 2 Install** `npm i -g pnpm` → `pnpm install` → `pnpm dev`
- 3 Pick Issue** Issues → filter 'good first issue' → comment 'I'm on it!'
- 4 Branch & Code** `git checkout -b feat/name` → edit → `pnpm build`
- 5 Open PR** `git push` → open Pull Request → link issue → done!

What you gain

- ✓ GitHub contribution permanently on your profile
- ✓ Name in CONTRIBUTORS.md — credited forever
- ✓ Real open-source experience for your resume
- ✓ Personal PR review & guidance from maintainer

Good First Issues — Ready Now

- Add Storybook story for Alert (15 min)
- Add Storybook story for Badge (15 min)
- Add JSDoc comments to Button (20 min)
- Add aria-label to Pagination (20 min)
- Fix typo / broken link in docs (5 min)

Where Uibrium Thrives.

From weekend side projects to enterprise-grade product teams.

Startups & MVPs

Polished UI in days. No designer needed. Full component system out of the box.

Dashboards

Table, Tabs, Badge, Accordion — exact primitives every analytics UI needs.

SaaS Products

Scales from beta to enterprise. Professional UI that grows with your product.

Internal Tools

Admin panels, CRMs, back-office — consistent, trusted, accessible.

Design Systems

Use Uibrium as foundation for your own company component system.

Client Projects

Deliver premium frontends fast. Impress clients with polished interactions.

Uibrium in Numbers.

What's Coming to Uibrium.

Subject to community feedback and contribution velocity.

1

Now — v1.0

- 19 production components
- ThemeProvider + dark mode
- WAI-ARIA accessibility
- Full docs on Vercel
- npm package live

2

Next — v1.x

- DatePicker & TimePicker
- Toast / Notification
- Progress + Skeleton
- More form primitives
- Expanded hook library

3

Future — v2.0

- CLI component generator
- Storybook + Chromatic
- Advanced theming tokens
- Visual regression tests
- Broader A11y testing
